# Plan browser support (Tech&Travel Booking Engine 2.0)

**Updated: May 19, 2011**

The Tech&Travel Booking Engine several commonly used Web browsers. However, certain Web browsers might cause some T&T Book Engine functionality to be downgraded, limited, or available only through alternative steps. In some cases, functionality might be unavailable for noncritical administrative tasks.

This information describes different levels of Web browser support according their own implemented feature and each DOM implemented.

We aim to support as many web browsers increasingly. Browser support is an important part of our Tech & Travel developer team.

**Browser support levels**
Browser support for T&T Book Engine 2.0 can be divided into three different levels, as follows:

- **Supported**

  A supported Web browser is a Web browser that is supported to work with Tech & Travel Booking Engine 2.0, and all features and functionality work. If you encounter any issues, support can help you to resolve these issues.

- **Supported with known limitations**

  A supported Web browser with known limitations is a Web browser that is supported to work with Tech & Travel Booking Engine 2.0, although there are some known limitations. Most features and functionality work, but if there is a feature or functionality that does not work or is disabled by design, documentation on how to resolve these issues is readily available.

- **Not tested**

  A Web browser that is not tested means that its compatibility with Tech & Travel Booking Engine 2.0 is untested, and there may be issues with using the particular Web browser. Tech & Travel Booking Engine 2.0 works best with up-to-date, standards-based Web browsers.
